Don't get up on that chair in the corner of the kitchen while taking a phone call. Otherwise, you'll be stuck there for half an hour. Not good when you're hungry and a half hour is half an hour of great conversation with a dining companion. The other thing I learned? Don't use the back porch door. We're getting frost. That door doesn't have a lock. Welcome to the world of blogs. I know, it's a strange way to connect. Not the technology. The Internet is based on technology. It's a medium through which we can share information. It's a time capsule. So can you imagine this: imagine going through life, and later in life someone has the audacity to begin sharing their thoughts through a blog. That is the blog. I've had mine for years, and I've done it primarily to keep myself from being eaten alive by email and the phone. Facebook. Twitter. Friendster. MySpace. One of the things I love about the blog is that the walls are being pulled down. Gone are the days of anonymity. Gone is the fear of some family member getting wind of your speech of thoughts. It's a wonderful, wonderful thing. This morning I was walking down the hall to the bathroom. I heard some shuffling noises. It was easy to imagine that one of my three girls was in there, flicking through the channels on their tiny little TV. But it was the staff. I counted twelve. Now, they aren't all my kids. Some are staff. Some are guests. They come and go, and I don't know their names. But they are all precious in my heart, and I love them dearly. As I walked down the hall, I heard some more shuffling. I looked into the living room to see if anyone was in there, and I saw a guy in a stocking cap, and his head was bandaged. "It's okay," I said. "Go

The Internet has been integral in developing the digital societies in which we live. As technology advances and Internet access and usage expands, digital literacy plays an increasingly important role in everyday life. Lecturer Dr James Franklin will illustrate how this so-called 'digital literacy' affects the ethical use of the Internet. For the first time in Europe, Dr Franklin will illustrate the concept of academic ethics. The presentation will show how the concept of academic ethics is not just an idea from the past, but is important for today's university student. After his presentation, Dr Franklin will discuss practical aspects of Internet use, such as how to access the Internet in a safe manner and how to protect personal information online. ASUS Wireless Console X64 (Latest)

ASUS Wireless Console is a lightweight and efficient application designed exclusively for ASUS notebooks that allows users to easily switch wireless or Bluetooth connections on and off. With ASUS Wireless Console, it's easier to handle wireless and Bluetooth connections, since it's all possible by the press of the function key (Fn). Everything about ASUS Wireless Console is easy, starting with the installation process to the point where you actually start using it. And it all works out for the best, since it acts friendly on the system resources as well. ASUS Wirelless Console is brought inside a simple UI that provides quick access to the two services (or only one of them, depending on what the notebook is equipped with), allowing you to turn off the connections selectively. The changes will quickly reflect in the appearance of the system tray icon that identifies the presence of the services. If both services are on, the icon will show both of their representations, while the presence of only one of them is marked accordingly. You can also scroll through the selection of Bluetooth and wireless by holding down the Fn key and pressing F2. All in all, ASUS Wireless Console is worth having for the easy manipulation of wireless and Bluetooth services. Switching them on and off is a child's play compared to the scenario where you'd have to do this work manually without its assistance.
