Below is the original image. The original article may be found here. [[File:hondacbr600rrpc40werkstatthandbuchdownload.png|thumb|

Script gets the output (above) line by line, removes surrounding whitespaces and then processes each line further. A: If you're just trying to remove some characters, you could do it without a shell: $ sed -r's|([^A-Za-z]*)([^0-9]+[0-9]+)[A-Za-z]|\1\2|' input.txt sed -r's|([^A-Za-z]*)([^0-9]+[0-9]+)[A-Za-z]|\1\2|' is GNU sed, s|([^A-Za-z]*)([^0-9]+[0-9]+)[A-Za-z]|\1\2| matches like "[0123456789]ghi[ABCDEFGHIJKLMNOPQRSTUVWXYZ]". -r is GNU sed's extended regular expression support, matching the entire line. Addition, there seems to be a function in "GNU stat" that can take a filename as input. Here is a bash example: tmp=$(mktemp -u) function remove_chars { file=${1:-$(mktemp -u)} builtins=(for file in $(find. -maxdepth 1 -type f! -name '*~' -print 2>/dev/null) ; do echo -n "${file} "; stat -c '%a' "$file" ; done) for builtin in "${builtins[@]}"; do awk -v var="$builtin" '{$var=substr($0,1,1) substr($0,2)} 1' "$file" done } remove_chars "$tmp" tmp="${tmp%-*}" Here is a GNU stat example: rm -- /dev/stdin /tmp/a* stat -- /tmp/a* -c '%a' /tmp/a* There is a similar function in "BSD stat" (if using it is more appropriate), and there are probably other similar functions in the POSIX family of systems. Here is an 3e33713323
