SuperDisk Partition Manager is a Windows disk management tool that allows you to quickly and easily manage, format, and create partitions of all sizes without the need for a reboot. All it takes is a few mouse clicks to get the job done and SuperDisk Partition Manager will let you do it in no time. SuperDisk Partition Manager is a highly-configurable and highly-customizable partitioning tool that allows you to easily create, resize,

and format partitions of any size, within any drive, across any number of drives, all by just a few mouse clicks. It also lets you convert existing partitions to FAT32, and it's even capable of recreating all sorts of NTFS or FAT32 partitions and removing the ones you don't need. SuperDisk Partition Manager offers all the functionality of a complete disk partitioning software suite and everything in one package. If you're looking for a free partitioning tool that has all the

features, SuperDisk Partition Manager is for you. SuperDisk Partition Manager also boasts an easy-to-use graphical interface, with all the features and options you'd need, including the ability to quickly remove, change, create, resize, format, and convert partitions. It also lets you make as many partitions as you'd like across all of your drives, right from the start, and it can even show you how much space is available and if it's being used. Additional features SuperDisk Partition Manager

includes a number of features and options for making it easier to work with hard drives, such as:

- Built-in Disk Defragmenter, which keeps your system organized by rearranging all the files on your drives
- Easy-to-use Disk Management Utility, which lets you see all the information about your hard drives and partitions, as well as manage and view any available space, and allows you to easily make and delete partitions
- Dual Mode, which lets you easily change between the graphical and

command-line interfaces, all without ever needing to reboot your PC • Free Up Space, which lets you remove all the unused space from your hard drives, partitions, or drives and makes free space available for use, thus giving you more free space to use • Local and Remote Disk Management, which lets you easily transfer all the data from one of your hard drives to another, as well as to your hard drives located on another computer • Read/Write NTFS/FAT32, which lets you

easily copy files
