*****Save for Web & Devices****. Saving your work in the proper format enables you to get the best quality for the web. The Save for Web and Devices format is covered in "Save for Web & Devices". *****Language****. You can use English, French, German, Italian, Spanish, Simplified Chinese, and Japanese as your display language. You can change the default here, but it's generally best not to. *****Develop Settings****. These settings are related to the appearance of your image, such as the color contrast, image quality, and image resolution. For these you usually set the options after your editing and to your liking. *****Styles****. The Styles panel gives you a preview of your image as various visual effects are applied to it. When you're done editing, you can toggle these features on and off. The left side of the panel provides thumbnail previews of the styles, effects, and filters that are currently applied to your image. You can see the current picture settings by choosing Image → Adjustments → Desaturate. *****History****. The History panel has a review of your previous edits. You can choose to keep only a few recent edits for faster navigation; or you can view your entire editing history, which is very helpful for multiple-step edits, since you can step back to undo an earlier error. *****Layer Controls****. The panel on the left side contains icons that control the visibility, display, and other properties of the layers in your image. You can hide or lock layers so you can work without distractions. *****Flattening****. This is the most fundamental function in Photoshop. It's helpful for reorganizing images into layers. If you've just started a project, you may wish to use this as an initial stop. *****Optimize****. This function allows you to save space on your hard drive and Internet servers by compressing a large image to a relatively small one. This will save a lot of time once you've gotten quite familiar with the software. *****Smart Objects****. For the following steps, you first have to turn on Smart Objects. In the main panel, click the Linking symbol and choose Link. In the Layers panel, turn on the Lighten, Adjustment, or Emboss effect as the selected layer. Then click OK to save the linked layer in the Smart Objects
