Q: How to create a property file in Android? I have to read a key value pair from a property file. I couldn't find any resource to read the file. I am working on android. A: You can use this code: Config.properties in the package (Resource) in Java class: ap.categories = prof.myclass.sample ap.s1 = 20 ap.s2 = 30 sample.java in the package: String s1 = context.getResources().getString(R.string.ap_s1); String s2 = context.getResources().getString(R.string.ap_s2); Hope this help you. I[NTRODUCTION]{.smallcaps} {#sec1-1} ===== Laparoscopic cholecystectomy (LC) has become the operation of choice for symptomatic gallstones. Presently a wide variety of techniques of gallbladder stumps remnant management have been reported in the literature. Residual gallbladder stumps that are left behind after LC are usually managed with parenchyma-sparing cholecystectomy technique in order to avoid bile duct injury. The laparoscopic approach for management of these gallbladder remnants is a recent development.\[[@ref1]\] The majority of studies have suggested that intraoperative cholecystectomy with a normal intact gall bladder wall is associated with fewer bile duct injuries and is safe.\[[@ref2]\] We present a report of laparoscopic intraoperative management of an incidental >2cm stump of a hyperperistaltic gallbladder. C[ASE]{.smallcaps} R[EPORT]{.smallcaps} {#sec1-2} ===== A 49-year-old female patient presented with history of a lump in left hypochondriac region (knee) that was progressively increasing in size for the past 3 years. She reported progressive epigastric discomfort for the last 4 months. On examination, a hard, palpable subcutaneous lump of 3 cm x 4 cm size was noted in left hypochondriac region. General and systemic examination was normal. Investigations revealed Hb 10.3 mg/dl, total leukocyte count 12,500/mm³

Q: Using global variable to declare properties in C# Here's some code to declare multiple properties: class A { public int x { get; set; } public int y { get; set; } public int z { get; set; } } class B { public A zz { get; set; } } class C { public static void Main(string[] args) { B b = new B(); A z = new A(); b.zz.z = 42; Console.WriteLine(z.x); } } It's working but I don't want to use all the dots. Is there an alternative to declare those properties automatically? A: I haven't tried it, but it's worth a try: class A { public A() { int x = 0; int y = 0; int z = 0; } } class B { public A zz { get; set; } } class C { public static void Main(string[] args) { B b = new B(); A z = new A(); b.zz = z; Console.WriteLine(z.x); } } Wireless networking is a method of enabling devices to communicate with one another without the need for wired connections. The technology is generally employed to provide network access at the Internet and Intranet level. It may be employed to provide wireless LANs (WLANs), and wireless access for various types of mobile devices that may include Smart Phones, laptop computers, PDAs and the like. Wireless networking, generally, enables mobile devices to communicate with one another and/or to communicate with a wired network through wireless access points (WAPs),
