A layer lets you apply a given effect to a chosen object in a given area—for instance, you can add a glow to

Adobe Photoshop Elements does not cost much. You can get a student version for

\$9.99 and a personal edition for \$24.99. Adobe Photoshop Elements does not have as many features as Photoshop, but it has many features and tools for photographers. You can learn how to use Photoshop Elements right away. Open up Photoshop Elements and choose File > New. A dialog box will open. Select the type of file: You can choose from the following options: Video Video photo Image If you choose the Image option, you'll be prompted to select an image. Use the image editor tool to open your image. If you select the Video or Image option, you'll be prompted to select the type of file to save: Select the type of file: The File Format option is also populated. Open the image you want to edit and select an option from the list. For GIFs and JPGs, choose Compression and select the desired quality. Click OK to create

your new image. The image editor lets you manipulate your photo: Here, we have an image of my friend. We'll start by opening the file. Select the image that you wish to edit and click Open. In the canvas, we'll crop the image to remove the "do not crop" area: Click the Crop tool (yellow arrow). Click and drag in the canvas to your desired crop area. Drag the canvas so it covers the entire image and release the mouse button. You will see that the bounding box appears around the crop area. Drag the white square out of the image with the arrow keys. Next, we'll close the image and open it again. We can do this using the Image > File > Close dialog. Click the File tab. Select the Close option. Repeat the crop and close procedures to crop out any unwanted areas. Next, we'll remove the subject's background. In this image, we have

a yellow background (background #fca494) and a blue sky background (background #1dd1fe). To remove the background, select the Background layer from the Layers panel. At the bottom of the Layers panel, you'll see your layers. Make 05a79cecff

The user on the Mac has to get to his Settings > General > Accessibility. In the Accessibility window he can then select Magnifier from the panel on the left. The Mac browser (Safari) is also available in a magnified mode, but it might not be as convenient for users as this feature. In this case you can download the Safari Browser Magnifier (free) (You can also use the magnifier in System Preferences > Universal Access > Display). The magnifier lets you zoom into images and text. Some users might not see a noticeable difference, especially if the image or text is large in relative terms. You will have to try it out for yourself. Hendrick Feltman did a photo shoot to celebrate his new book of job applications

– and the results are hilarious Hendrick Feltman Job applications aren't always easy – but when you do have a second chance to impress your potential employer, what better way to do it than with a photo shoot? That was the thinking of Dutch artist Hendrick Feltman when he created this spectacularly funny job application photo shoot. The blank white space is punctuated by several giant job application letters – an act of their own to potential employers, which would see them invited to complete and submit their own applications. Mr Feltman took the opportunity to do a series of silly and fun job applications by sending them to famous New York buildings that are sadly no longer in existence. The results were so funny that they have been shared widely across the internet, reaching nearly 20,000 people. Despite the

humour, they also have a serious point, with the artist reminding us that we each have the power to shape our lives. Mr Feltman has commented: ‘Some buildings are no longer there but one of the world’s iconic buildings, the Empire State Building, is still very much alive. The old space could be potentially closed for the worse, but it can be a great opportunity to write a new story, a new meaning to life. And it will make a lot of people happy.’ ‘The Empire State Building’ was published in September, and can be purchased here./*****

The permutation operator on the Majorana modes is given by [Chen:2014unq]: π_i
