The page is to be opened with my user information added to the url. Since the project name and the user name are variable data, I thought I could just put them in the title parameter of the a tag. However, that's not working. When I change it to a relative path like '/issues', it works as expected. What's the best way to fix this? A: Here's the correct syntax: Q: Find in page javascript but does not recognize In my asp.net website I have some javascript in a master page, which I add to the page's on load event. I then use HtmlEditor to insert some html into the page, and once the page is finished, I check the code in the page, and find that the javascript is not there. I also have a debug window running, so I can see in the browser that it is not loading any javascript. How can I find the missing javascript? A: I think if you use a public class to wrap the html inside the editor, it will automatically add a script tag to your master page. HtmlEditor1.HtmlTextWriter
