DEVELOPMENT STEPS: Character Creation One of the most distinguishing features of Elden Ring is character creation. Character creation has been in development since the game was first previewed, and we have devoted much thought to its uniqueness and mechanics. Animation Schedule As the development process has progressed, we have put enormous effort into creating our own character animation, and we have even been developing a powerful simulcast animation system, which allows players to experience their characters in real time while watching them in animated form. Although the animation has been put into place on its own, we will be updating it as we continue development. LOCATION System The location system revolves around the town of Celitas and the "marks" of the lands. Each area you explore has its own distinct location, and the towns in the lands change according to the layout of the land.

Performance

AdventureQuest 3D is the result of a continuous effort to surpass the performance of its previous versions and provide optimal operation even for older hardware. Although digital technology is advancing, the graphics look just as splendid today as they did a year ago, and it is the data compression technique that has been expanded to maintain performance even on low-spec hardware.

AdventureQuest 3D will provide a satisfying experience even for low-spec hardware, thanks to the max-G RAM strategy of previous versions, for example. (This technique allows consistent and stable operation even with 1024 MB of RAM.) Furthermore, the in-game script format allows you to enjoy the game with only 16 MB of RAM, which is the amount of RAM for RAM-card PC expansion devices. And in addition, AdventureQuest 3D's graphics library draws upon the full power of the GPU, which provides graphical performance close to cutting edge devices.
