The year is 2109. Mankind is being forced into extinction. The human population dwindles. Cities crumble under the strain of poverty. War and anarchy spread across the once peaceful land. Strongest and smartest robots rise to the top and bring an end to their human creators. They will bury humanity under a thousand years of war and oppression or unite and rise to become the master of the world.

Empire of the Fallen Steel is an RPG with sandbox elements. The player is able to join one of the four battling factions, assemble his own band of reinforced robots, lead them into battle, conquer cities and

defeat the other factions. In the course of the game, the player will discover upgrades, technologies, building pieces and combat techniques. These will be discovered by the player and will be used to give him the combat edge over his opponents. The world is generated procedurally every time a player starts a game, so that every new game is unique. Also, every city and mission can be controlled by the player as the game progresses. The universe of Empire of the Fallen Steel is a large sandbox game world in which cities can be built and a faction can be conquered, as well as other players. The world itself can be seen through a map that the player can build over time. The cities that form are based on historical buildings, and the technology is based on inventions from the past. The technology is based on historical inventions. Therefore, the player has to acquire technology points to build technologies for his own use. The player can buy technology pieces from the shops for the most expensive technologies. There are also options to invent completely new technologies that have no precedent. "Volcanoids" is a roguelike within the realm of survival adventures; while its depth is intact, it has the aggressive difficulty level of games such as a "Hawkquest" or "Dungeon Keeper." The game is a hilarious combination of "Minecraft" and the "Castlevania" series. The game world consists of a grid-like topography with eight sub-worlds, each with its own theme. Once dislodged from the surface of the Earth, your character will travel through a zero-gravity environment, causing other elements to rise from the bottom of the map, and your character to plummet to the surface. Characters residing in a sub-world will recuperate and retain their health, but will be limited to a particular area of the screen. Characters can also choose to land in a square and drag to their intended destination; sometimes the ground will rise to meet you and you will have to climb up to get away. Volcanoids has remarkably deep gameplay, and the world will constantly push your character to take on more challenges and obstacles. PC Gamer (Spain) Gameplay: Volcanoids is a game where you build your own character, free-roaming and wild on the earth's surface. The environment is dynamic and realistic, and once it has been generated is impossible to master. This action takes you to eight predefined subworlds, each of which offers a unique landscape and rock formations. Caves, random images and many other features are scattered everywhere and you have to face their challenges. Of course the character you choose plays a major role in the game and it is your own to develop, you can multiply as a game goes on, and in this way you can gain experience and expand. It has been designed to be difficult so that the players do not get bored and will find the game very interesting. Tribune (UK) Gameplay: Volcanoids is a side-scrolling shooter game. In terms of gameplay, it doesn't change very much from many of its roguelike past - where you get to play as a nameless adventurer whose sole task is to explore the magnificent, treacherous terrain that the land has to offer, gather resources, collect bonuses, construct an arsenal and then exterminate the monsters that occupy the world.

What's new:

The most anticipated novel of the year is poised to shock, stun, and mystify you - or, at least, that's what sales reps of Easton Press are telling me. The final volume of Douglas Adams's Hitchhiker's Guide to the Galaxy series, *The Sobering Up* (due out in early autumn), has been shrouded by a decidedly eclectic release schedule and an even more eclectic reception. In today's electronic age, with advances in technology available to audio readers that rival the Golden Age days of Luce Mainwaring's *Victoria* series, it is hard not to wonder about the inevitability of such a series on tape. I for one was waiting for Adams's endgame. The Science Answer For Brian Jacques, it was a week of health after a trying quarter. The former leader of a Swiss research team has just finished the 13-volume series, *Redwall*, in which he invented a marshy bittern called Morris the owl. Jacques may be known better for the bestselling books that catapulted the Jacques *Redwall* series into perennial paperback best-sellerdom: *The Barking Detective Agency* and its sequels, *Rogue's Vineyard*, *Stone Fox*, and *Rat Man*. But though the apprentice tinkers here may struggle to carry off such a delicate and demanding character as Morris the owl, his quest to complete the first volume of *Redwall* has filled him with a sense of purpose that must surely flourish in the light of adversity. "I'm very happy," he says. "Very happy at the end of a very difficult quarter, that's quite a feeling for a new series to start." The U.K. Independent Ken Bruce's tenure as BBC television's late-night music show is coming to an

end at the end of this month. Bruce is moving to the new edition of Q Magazine before he turns 56 - he will be along shortly for the new TV series, Bruce's Birdsong - and he's decided to end his regular column. So don't think of this as the end of Ken Bruce, because it isn't, not entirely. Bruce will remain as much as ever the resident opinion-maker, the charismatic personality whose presence has been a reliable source of comedy and mischief and music and pure extraordinary karaoke. The only change will be that he moves to a radio timeslot he fancies. John Birmingham writes on radio and for the Guardian.
