JavaFX really made a splash when it was launched in mid-2012 with the Java-based framework being the tool-of-choice for building sophisticated desktop and web user interfaces. Its popularity has continued to grow over the past few years and is now a key component of new Java EE 7 platforms, such as the Java SE 7 platform and the upcoming JavaFX 2.0. While JavaFX 2.0 is unlikely to be adopted soon, it remains a solid tool for building rich GUI interfaces in Java, while also providing a solid foundation on which to build more robust applications. Since it is still the early days of JavaFX and the Java SE 7 platform, it's still possible to find some Java code and libraries that are yet to be ported to JavaFX 2.0. This is why we are pleased to introduce a beta release of the ported JGraph Libraries, a set of JavaFX-based graph components, that makes it possible to quickly and easily build Java applications, with just a few lines of code and without any additional dependencies. The JGraph Libraries offer JavaFX 2.0 viewers, editors and layouters, as well as layouts and vertex stores for key-value and relational graph data. They are fully compatible with JDK7 and up, although the source code compiles only with JDK6 and JDK5. The latest release of JGraph Libraries beta contains 23 components that cover a wide variety of graph types and data structures. The JavaFX 2.0 support for the JGraph Libraries builds upon the JavaFX 1.x support and the 2.x features have been mapped to the 1.x based libs. This means that the JGraph 2.0 support for JavaFX 2.0 is completely identical to the 1.x JGraph JavaFX support, as it is based on the same set of open source libraries. The apps offer a workbook viewer for viewing and modifying.xlsx (Excel) spread
