of the Zodiac - Boss: This guy is incredibly hard to kill even when he has no other monsters on him. Rarely does it happen that he will be defeated, and then he's all over the map. He can hit you with a small fireball, smaller burst of fireballs, thunder, and will Curse you on login. To kill this boss just run to the edge of your screen with full health and toss a fireball or meteorite in his direction; If you're lucky enough he will die. If you're very, very lucky he may go back to his spawn spot, into the darkness, never to be found by a wizard again. If he doesn't spawn and one of his extra spawns happens to be next to you, he can spam cursed spawns in your direction and eat you for breakfast. Stay out of his extra spawns and abilities as they will eat your hp. Next up: This is actually another boss that can get the occasional kill. The only reason one would be online is if a friend dies and is turned into an extra spawning enemy. Dragon: A beast you should enjoy seeing roam the Zodiac. She isn't too hard, but as with all bosses some of them can be tricky. To kill her simply fight your normal preys. Arrows or slotted weapons are bad choices. If you get her good enough then you should be able to fourshot her, then hit with a Quillion and run away. Keep killing her should you wish until she finally dies, making your nemesis the xp monster. Next up: Animal Prey: Fighting and killing pixies is relatively simple if you get in close. Prey will add another 15 dmg from various assualts. Pull some distance away from her, get your shield up and start attacking her. She has a hit and run combo, so if you get her slowed all the way, fire away and run. Next up: Derpy's Prey: This little girl will add you enough damage to fill up your stat bars by just attacking you. At end-game you can actually just run away, watch as she incards your lifegiving magic, then finish her off if you feel like it. Other Tiers After you've conquered all in the Zodiac you can get your scores in the Other T
