Blending Layers As you edit a picture, you may notice that two layers seem to get \_blended\_ together, and this may occur when the two objects touch. For example, if you accidentally paint a bit of hair onto a woman's face and when you erase the paint, the hair disappears in a similar location to where the paint was erased. Layers allow you to create \_blending modes\_ for the photo. When you set your layers to blend, objects in them interact with each other in cool ways and make photos more interesting. Your ability to alter the way images look depends on the skill and experience you've developed so far. ## Editing Layers with the Blending Options Chapter 5 discussed how layers allow you to create editable clipping paths. You can also use layers to set your layer's blending mode, which is a way of telling how Photoshop blends two objects together. Blending modes are discussed in Chapter 7. Depending on the mode you choose, Photoshop blends the two objects together in two ways: \* \*\*Normal mode\*\* blends the two objects together as usual, but you can reverse the effects. When you choose Normal mode, you get the default effect, which is similar to the effect you get when a photo is developed in

Q: ruby version installed on OS X 10.8.2 is different than the system installation I have successfully installed ruby-2.1.2 using the command line: # echo \$PATH /Users/myuser/opt/local/bin:/opt/local/sbin:/opt/local/bin:/usr/local/opt/openssl/bin:/usr/local/opt/libyaml/bin:/usr/local/opt/libiconv/bin:/usr/local/opt/autoconf/bin:/usr/local/opt/automake/bin:/usr/local/opt/libtool/bin:/usr/local/opt/pkg-config/bin:/usr/local/opt/flex/bin:/usr/local/opt/bison/bin:/usr/local/opt/python/bin And yet, when I run irb, it says: \*1.9.3-p385 is installed I also tried to run the rvm command to install ruby, but it says it can't find my installation directory: \$ rvm use 1.9.3 Using /Users/myuser/.rvm/gems/ruby-1.9.3-p385 Error running 'env LDFLAGS=-L/opt/local/lib-L/usr/local/lib CC=cc CXX=C++ g++', showing last 15 lines of /Users/myuser/.rvm/log/ruby-1.9.3-p385/do\_compile.log ++ '[' -f /usr/local/opt/bison/lib/cmake/Bison.cmake ']' ++ '[' -f /usr/local/opt/bison/lib/cmake/Bison.cmake ']' ++ '[' -f /usr/local/opt/bison/lib/pkgconfig/bison.pc ']' ++ '[' -f /usr/local/opt/bison/lib/pkgconfig/libbison.so ']' ++ '[' -f /usr/local/opt/bison/lib/pkgconfig/libbison.a ']' ++ '[' -f /usr/local/opt/bison/lib/pkgconfig/libbison.so ']' ++ '['

Note You can also use other parts of your computer keyboard to browse the brush library. Press the F key to view brushes, and click with the right mouse button to select brushes. 3. \*\*In the Brush panel, click to select the Brush tool (see Figure 1-19)\*\*. A small, button-shaped brush appears in the toolbox. Figure 1-18. You can browse through the brush library from a keyboard shortcut or by using the menus. Figure 1-19. A regular brush. Brushes are designed to allow you to see exactly what they're doing, which is important if you want to use them effectively. With a simple 3D brush—for example, the Pen tool, shown in Figure 1-20—you can drag a square area to draw. If you hold down the Shift key, you get a smaller rectangle. Hold down the space bar to see a corner. Figure 1-20. The Pen tool has dozens of settings to let you customize the shape and size of the drawn area. But if you simply drag to make a rectangle, you can't see exactly where your strokes are going. You can use Paint Bucket fill (Image→Fill) to draw, erasure, and then erase a rectangle around it. Click the paper icon with the arrow pointing to an "X" at the bottom right of the Image menu. Brushes have many different size, color, and opacity settings that you can adjust. In the Brush panel, find the Size slider (Figure 1-21). This slider determines the size of the brush strokes, the size of the inset box in a 3D brush, and the size of a rectangle that you draw with the Pen tool. Figure 1-21. Use the Size slider to change the size of the brush strokes, the size of the rectangles that you draw with the Pen tool, and the size of the inset box in 3D brushes. The Brush Preset Manager is where you can create new brushes
