He was born "Gregoroh Tagame" to a Greek father, whose mother "Kay" and "Henry" is a Japanese..Q: how to define a function that receives a function as argument How to define a function such that it receives a function as argument, i.e. a function with argument func itself, i.e. in Python (3.x) i want to define a function that receive func, not func itself as it is in below code: def myfunc(func): print("here it works!") func() def func(): print("here it also works!") testFunc = myfunc(func) testFunc() A: You can define func within your myfunc function. For example: def myfunc(func): def func(): print("here it works!") func() myfunc(func) >>> here it works! >>> here it works! Notice how func gets closed over, and as you close over your functions, they will maintain their lexical scope. If you want to use it more than once, assign it to a variable: my\_func = myfunc(func) my\_func() In case you are using Python 2.7, you don't need to wrap func() call in another function. The present invention relates to a sealing device, in particular a membrane sealing device for sealing adjacent surfaces. Certain sealing devices are known which comprise a flat membrane which is held between two separate backing plates. A drawback of these known sealing devices is that, in the case of uneven separating surfaces which are to be sealed, in order to ensure sealing in the upper and lower areas, the backing plates are moved in opposite directions relative to each other. As a result, considerable mechanical effort is required. The sealing device is
