Note: Open Source software.Microsurgical vasovasostomy in rats: a new technique. Microsurgical vasovasostomy was performed on 71 rats by a new technique. At the first stage of the operation, a wide incision (1 mm) was made in the anterior wall of the bulbar segment of the epididymis, and the initial incision was made in a semicircular shape. The seminal vesicle was then exposed, and a 2-mm incision was made in the mid-dorsal and base of the seminal vesicle. A small incision was made on the posterior wall of the cauda epididymis and vas deferens, and the incised vas was sutured to the ventral wall of the vas deferens. In addition, the suture site was sutured to the vestibule using a catgut. There was no operation-related mortality, and a patent vas
