I have a bluetooth adapter (TP-LINK TL-BT1043) that I use with my nintendo switch. It worked great until I upgraded to 10 and it does not see the switch on the LAN. The bluetooth is a proprietary chip so I should have no problems installing it. Is there anything I need to do? Maybe driver install? Any help would be greatly appreciated. 2020.08.04 18:54.
