Derive 6.10 and 6.10.2 are version number differences and not system updates. The 6.10.2 update was announced after Derive 6.10.2 came out. Derive 6.10 also has more extensive support for Microsoft Office SharePoint Products while Derive 6.10.2 adds basic support for SharePoint 2010. Derive 6.10.2 also adds program support for Taylor HemiDynamics and HemiEdge (HemiEdge uses HemiComputing brand names). Derive also allows you to create mathematical and scientific calculations by putting numbers into a formula and pressing a button. Derive is easy to use. Just put the numbers into a formula, press a button and let it calculate the answer. Derive will give you a detailed preview of the result and print it to your computer's printer. Derive includes an electronic mathematical calculator with a slide switch, a keyboard and four arithmetic signs. The integrated calculator has 64 memory positions that can be used for temporary values or as constants. The program can be used to produce complex mathematical equations and perform long and tedious calculations, saving a lot of time. Derive is easy to use. Just enter an equation, the results appear on screen and the program saves your work or prints it to your printer. Derive is the electronic calculator with graphical user interface, which allows you to perform various mathematical computations. Derive is easy to use.
