The new Enhanced Edges feature finds sections of linear and radial gradients that are similar to each other. In addition to the new method, it also works on images during reviewing. It uses a method that can also find pairs of similar edges but with a different position. All these available methods are determined and chosen based on how much you want to sacrifice exactness. Use the "apply all" method, and you can get an excellent result. Otherwise, if you want to have a bit more control over the end product, use the "create a selection" method. The Web-based Bridge works much like the iOS version. However, with it being web-based, you cannot use a desktop software to access it. It supports the newer iOS6 Safari browser, either with or without the mobile chip. As with the previous versions of Elements, you can limit the changes in an image by defining the layer to be used for the next step. However, you can also import a selection from a layer with another name or replace it with an existing selection. You can then apply an adjustment layer or layer blend to only that selection, as opposed to all the area below it. The new Markup panel has been replaced by Sequence Layer that allows you to see a progression of edits in an image. Other than viewing the editing history, it also has many other edits to aid in the creation of a retouching project. One of the more interesting features of Elements 5 is the new blend modes. Besides the popular opacity blend, there is now also a lens blur blend mode based on the older tutorial by Jeremy Owen.

"The new release of Photoshop has profoundly transformed the way we work in Photoshop, whether we're using it for creative projects or retouching images," said Mike Wilkins, vice president, Creative Technology, Adobe. "With the new Share for Review features we've been able to put some really powerful tools in the hands of Photoshop users at no additional cost to customers." "Elements and Photoshop remain at the forefront of performance, speed and quality," Wilkins said. "In this new era, Photoshop is making the cloud accessible to everyone. We're excited to take the next step in democratizing Photoshop, making it easier for creative teams to work from

anywhere, anytime as long as they have an internet connection." For the first time, users can share work in progress (WIP) directly from Photoshop, eliminated the need for third-party software and synced images to the cloud via the Creative Cloud so that they can seamlessly continue to work from any device. Share for Review makes it easy to collaborate on projects with friends and coworkers, and even more so with non-Creative Cloud members. In just a few clicks, you can invite a group of people to view your WIPs, and as collaborators they can make changes to your work. In addition, users can log in with an Adobe ID that they don't necessarily have to create on the web, making it easier to collaborate with friends and family who may not use the Creative Cloud. Adobe says Share for Review is available for Windows, macOS, iOS and Android devices.
