I have been using Adobe Photoshop for more than 35 years and have always been a Photoshop user, though after the release of Photoshop extensions, I have used Photoshop Elements exclusively. It has always been very professional and user friendly. I am upset that Photoshop Elements and Photoshop can no longer even be considered competitors. I look forward to reviewing the new website and excited about the early adoption of the new technology. Glad to see open comments in CC are finally finally here. This is an excellent feature that was long overdue. It will be really interesting to see what comments are made and also the reasons why they are made. Adobe understands that professional designers and artists need a way to review drawings and photos, and that's where Photoshop Sketch comes in. It's a feature that was long overdue and the timing couldn't be better. If you're a content creator, this feature is absolutely essential. Nice to see that the new Review feature in Photoshop CC is now live. I can't say that I was too eager for this feature, but I'm glad that this is now an option for my workflow. However, I've never been as big a fan of Photoshop as some have been, and after having played around with Photoshop Sketch for a few days, I have to say that I won't be buying PS CC after all. I can get by just fine with using Photoshop Elements, and even if I wanted to upgrade to Creative Cloud, I don't think I could justify paying for a full Photoshop license.

There are other tools in the Adobe ecosystem to do the work I need to accomplish.

When it comes to working with pixels, we can't do much but make them smaller or bigger. We can't change color, brightness, or curve. But we can combine pixels to create new colors and make the objects in our artwork appear larger or smaller by enlarging or reducing the image. 933d7f57e6
