The new version seems to have improved significantly with the CS6. When I first started out with the software, it was less than a perfect. But the latest version is more than perfect for professionals. The new features enhanced greatly in the latest version. I am hoping that the adobe will take out the products for web professionals. It would be good for all professionals. Photoshop is close to becoming a complete powerhouse, powerful enough for most of the work of a graphic designer and with a connected suite, able to handle everything in your pipeline. But it goes further than that, blurring the often-critical line between graphic design and art direction, providing a glimpse into the technical processes of graphic design. As a post-production tool, it's far more reliant on software plugins than any previous version of Photoshop, which is likely a good thing. CS6 is an extremely capable editor that can do anything you want it to do in terms of image editing. It is fast and powerful and it is really easy to use when compared to previous versions. Camera Raw CS6 is also a great supplement to this software. I now look forward to using Photoshop as my primary tool, replacing my current suite of design applications. I previously used CS6 Release Candidate for the first time only a few days ago and I feel that the new interface is great. Previous versions were pretty ugly. Adobe finally fixed the major > MS office Word compare freeze bug. hope if other similar office have the same bug, they fix it as fast as they have done now. A lot of users are still using old version – 15.0.0.190 on windows 2008 server.

The Photoshop CS5 has become the newest version of the Photoshop family of programs and available for Windows. This is the version of Photoshop that I will use to create the Photoshop tutorials. I've covered everything the Photoshop has to offer. Above, I used the Clone Stamp tool to isolate an area of the image to work on. I'll use some of the tools I learned to create some artwork. I used a few layers in Photoshop to create the 3D shadow. I covered the text and background in Photoshop. You will learn how to create a layered PSD file. A dot is the smallest area of color, whereas a pixel is the smallest area of color beyond the border. The size of a pixel on the screen is determined by the monitor and is very small, usually about one millimeter in width. You can also organize these folders into your own system of presets.–and build your library of presets to use on a regular basis with preset collections. Now, you can view presets side-by-side to choose which ones you want to use each time you open the application.–as well as these geometrical preset collections. You can now create personal preset folders. You can share these preset folders with your colleagues or collaborators. This means you can save a bunch of custom presets that will always stay with you.
