Anatomy (Ucpress Science.From  
Heartbeat to Smell: Biomimetic  
NIR-PLNAs and BPNs for Imaging-  
Based Theranostics. We designed  
and synthesized novel  
nanostructures based on a  
multifunctional Schiff-base (SMN)  
that can achieve both high  
photostability and good  
photothermal effect, under 671 nm  
excitation. These multifunctional  
compounds were used to fabricate  
polymeric nanoparticles (PNs) and  
single-molecule nanoplatelets  
(PLNs) for imaging-based  
theranostics. The obtained PNs

have a size of  $155 \pm 5$  nm, SMN-PLNs were obtained with an average size of  $78 \pm 14$  nm, and PLNs present an average size of  $17 \pm 2$  nm. The obtained nanoparticles show excellent optical properties, which are correlated to their nanostructure morphology, offering an adequate response for photothermal effect under the NIR light excitation wavelength. By virtue of the PN formation, these multifunctional structures obtain a nanoscale size, thus allowing the use of these nanoparticles in a biological environment. The presence of drug molecules in the SMN platforms imparts a very good

biocompatibility and a controlled drug release. The obtained systems were successful in imaging-based in vivo, and were able to efficiently treat a subcutaneous inoculum of colon cancer cells

(CT26). Pulmonary arterial hypertension after autologous stem cell transplantation for lymphoid malignancy. Pulmonary arterial hypertension (PAH) is a progressive lung disorder with a variable natural history and high early mortality. Despite advances in PAH therapies, there are few data regarding the frequency and prognosis 04aeff104c
