Adobe has updated all the content in the **Color Merge** panel, including the Filter presets, Color Balance, Version, Toning, and Layers panel, to make it easier to achieve process-based image adjustments. The latest update to Adobe Character Animator 2018, Character Creator 2.0, adds new author points, new point modes, and a new Hero Arts support option to the tool set.
The author points are those 1-2 buttons at the top of the timeline that call up the tools that make up each point. There are now 2 available at the top of each point of the timeline. The primary button will call up the tools you can use to create that point. That button changes when you go into some of the panels that allow you to access those tools. The other button will allow you to access any of the tools you have available in the current panel. The newest version of Photoshop is more polished and refined than any previous release. For example, the toolbars now have more color, and some of the text is crisper. The new design also allows for much faster navigation, so you can zoom around a scene even faster with the scroll wheel on the onscreen touchpad. You can also create a new tab with a single click in almost any place in the app, and those tabs now appear and disappear automatically. You can also pin or unpin menus to a panel, and drag toolbars from panel to panel if you like. You can even change the default settings for each tool in Photoshop's panel settings, so the button is always arranged how you find it most useful.
You can also take snapshots of panes and save them as templates that you can then apply to other documents. You can also lay color, patterns, and brushes over a frame to visually make several frames of text at once. You can easily move, copy, or paste frames.
