Lightroom's Insight Previews are a great feature for quickly adding expressions to a photo where the only adjustments you need are a little bit of cropping and color adjustment. You can also access this feature via the Edit menu. You start by opening an image from your catalog and start clicking the "Preview" button. A pop-up window will ask what adjustments you intend to make. Adjustments consist of a region of your image that's brought to the center of the image – a small white square as seen in the figure. You can also set specific areas to be the preview regions (you can make as many or as few as you want). From there, you can move and zoom your camera or make adjustments to the image. You can also adjust the Exposure, Contrast, and other settings of the image to get the best preview of how it will look after the adjustments are made. Lightroom 4.3's display was very compact and unobtrusive, but the mouse movement caused a lot of small motion artifacts in the preview—and the real image window didn't seem to have any of these issues. With Lightroom 5, the preview crop is larger and uses more of the display, which both helps minimize small motion artifacts and makes it feel much more like interacting with a photo. Lightroom 5 introduces many new features, and a lot of small enhancements and bug fixes that make up its new enhanced Features. If you feel like you're missing a certain feature, you're probably right. Most of the extraneous little changes I'll offer up today are enhancements for people who are coming from Lightroom 4 or any other previous version.

The aim is to create an interesting combination of images, type, and color without compromising the integrity or coherence of the design. The edgy typography of the Young Designers or the graphic illustration of design magazine covers are two examples of how a "photograph" can become a template that drives the design of a book cover or a billboard.
