Adobe Photoshop simply remains at the very top of the pile, releasing multi-core optimisim, major camera support, scripting, multi-stage layers, applescript etc. If you're still an Adobe product user, why change at all? If you're looking to get the most out of Photoshop, and you've got the budget, Photoshop CC is the version for you. The only hesitation I have on the CC version is the yearly price increase. Keeping tabs in Google, I've seen it range anywhere from $499 to $1,000 or more. The latest capabilities are absolutely worth the money. For $400, you can hold Photoshop's brush settings, depth of field, the ability to merge layers, clone stamp or even even lines. Aside from these things, you get a bunch of amazing editing tools that have been removed from the base version of Adobe Photoshop, as well as creative effects and some very useful library functions. For artists or designers, this will be considered a fantasy release, and it might even be an upgrade a lot of people would like to make. While virtually everyone has something they hate about Photoshop, it's also the program that is most widely used. Probably if you use Photoshop, you're a photoshop functionality fan, and thus will love it even more now! Adobe Photoshop Sketch is a perfect example of why artists and designers should give the iPad Pro some real thoughtful consideration. Along with the Apple Pencil, the iPad Pro and Adobe Photoshop Sketch feel as though they were made for one another.
