Despite the numerous tweaks and added features, Lightroom remains one of the best all-in-one photo management software - providing everything you could possibly imagine. The extensive feature list has been completed to the dot, all - or almost - the areas I can think of as well - selection tools, be it Paint Raw, Spot Removal, Design and Effect, Smart Adjustments, all these in one, all way powerful - even better than Photoshop, this is? I can tell you that a dirt road in the countryside, with a little Windex and a rag for the windshield became really nice and clear. Well, for fun, let me go back to what I said above. In the new version is an option to complete the RAW with JPEG. An option, as we can see, which is turned on by default. With it now on, Lightroom displays your Photo (or Picture) as well as the RAW as JPEG to the left side. This is a VERY nice feature. The additional space is a really welcome addition. As recent versions of Photoshop have been missing new features for Mac users, Adobe has recently made some changes for versions 8 and up. As we have said previously on this review in other sections of this Photoshop review, Photoshop Elements 3 is a solid upgrade from version 2. It is quite a big upgrade, too, as we reviewed previously in my January 2010 review of Photoshop Elements 3 . I am happy to see that Adobe has added to the ever-growing collection of great features in this version. The reviews in the linked articles above don't mention anything negative that any

of the editors who did write Adobe Photoshop reviews said about the app. Instead, the good reviews are mostly from those editors who are happy with the app for its editing simplicity.
