It is time to summarize my review. Here are some of the changes I like most. As you can see, Adobe made things easier when working with color and tone, and now you can use the Brightness / Contrast and Curves adjustments as seamlessly as any other slider. You can see a preview right in the Layers panel, too, which places a great deal of weight on my recommendation that Lightroom be used for editing color and tweaking; it is simply the best way to edit color at the moment. Having said that, I do not think that the new toolset is completely perfect. The combination of the ability to edit color and tone in Lightroom and render it in Photoshop is simply great. Unfortunately, the latter only correctly implements the former if you use a connected camera, regardless of whether it is RAW or not. Plug-ins, such as the Silkipix converter, do a better job actually, since they can filter out unwanted noise and provide more accurate color. It is a small difference, but it's an important one. Even so, Lightroom is still the standard in my book. It's the best way to get stuff done fast, and use any set of tools to perform simple editing tasks in Photoshop is a bit cumbersome, especially for folks like me who use Photoshop for two things: photo retouching and delicate image editing. At the end of the day, I find Lightroom perfectly usable, and it may become better with the upcoming updates. Meanwhile, I am delighted to see Suggested Edits added in CS6. This feature was sorely missed in most tools, except for Lightroom. Basically, this means that the software will consider editing choices it has made before, and you won't have to do it yourself. I much appreciate being able to see what Adobe thinks I would edit my photographs, and that makes me like the new program even more. Of course, Suggested Edits only makes sense when you use it with compatible photos, so you might not see much of a difference. When you combine the new version with the update to Quick Fix, you also get a far more comprehensive set of retouching tools than before, which makes me even happier.
